

The Town of Castle Rock is committed to the wise development and use of its water resources. Our goal is to create a community culture that embraces water efficiency with smart water management techniques, promotes the use of efficient irrigation equipment, and encourages the use of ColoradoScape design principles. Water efficiency can save the Town and its rate payers millions of dollars in infrastructure, help stabilize future rate increases, protect property owners' investment, and most importantly, extend the life of the aquifers.

One tool in our water use management program is a watering schedule. This demand management tool allows us to manage adequate volume and pressures within the water distribution system during landscape irrigation season.

Watering schedules

The irrigation season has been expanded this year to include May and September. This watering schedule is in effect May 1- September 30.

- Non-residential properties must adhere to a three-day-a-week watering schedule
- Properties west of I-25 are designated Monday, Wednesday, and Friday
- Properties east of I-25 are designated Tuesday, Thursday and Saturday
- Non-residential designated watering hours are 10 p.m. to 6 a.m.

Rebates

Check out the SmartScape Renovation Program where you can receive up to \$1.10 per square foot for removing turf and other high water plant materials. The maximum amount allowed has also been increased to \$15,000 and is available on a first come, first served basis. Visit crconserve.com/rebates for program eligibility requirements

Irrigation exemptions

Irrigation exemptions for new sod/seed will not be issued or applicable during the month of July.

ColoradoScape

You are encouraged to incorporate ColoradoScape in your landscape designs. This design uses low to very-low water use plant material which blends in with the native Castle Rock landscapes, incorporating hardscape and other materials which provide a variety of colors, textures, sizes, shapes, and seasonal interest. *Coming this summer, a Parade of ColoradoScapes and landscape make-over contest. Watch for more details!*

New lawn installation

Kentucky Bluegrass is not permitted for new residential construction. Note: All non-residential common areas and open spaces are already restricted from using Kentucky Bluegrass. New or renovated streetscapes (islands, medians, roundabouts, easements, planting strips) will not have turf grass and must have plant material that uses less than 10-inches of water per growing season.

We appreciate your continued commitment to saving water to ensure a strong future. We look forward to working with you throughout the irrigation season and welcome any comments or questions.
